

# Aptigent's CTI Kiosk

## Powerful & Cost-Effective Information Kiosks

Computer-based kiosks have long been used to connect employees, customers and visitors to key information resources. Typically used to present directories, current events, location and directions, advertisements and other similar information, computer-based kiosks can also provide self-service and even e-commerce solutions. As good as computer-based kiosks are, they are frequently too obtrusive or too expensive to deploy.

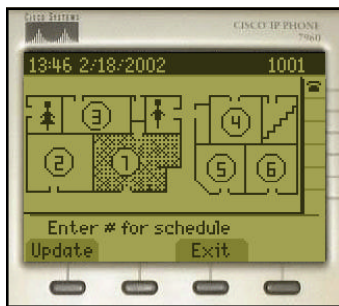

Aptigent's CTI Kiosk software solves these problems and makes the deployment of information and self-service kiosks a practical reality. CTI Kiosk turns any IP Telephone into a point-of-contact kiosk, allowing you to exploit your current telecommunication investments to deliver information and services directly to the user.

The CTI Kiosk is a practical solution to your information outreach needs, blending easy-to-use information resources with the convenience of a telephone.

*Information, advertising and storefront presentations*

### How CTI Kiosk Works

*Textual and graphic message support*

Using the CTI Kiosk system, you can easily create both information and self-service kiosks, and can also manage the presentation of advertising and current event messages.

CTI Kiosk provides a web-based administrative console allowing your information resources to be easily defined and managed. Aptigent's CTI messaging and remote application management technologies are incorporated into CTI Kiosk, providing powerful communication and resource management capabilities. E-commerce and storefront components are also included to support full-featured Kiosk solutions.

From simple applications such as unattended reception areas to complex environments requiring self-service and E-commerce solutions, Aptigent's CTI kiosk provides the tools and resources you need.
