

Aptigent's CTI Messenger

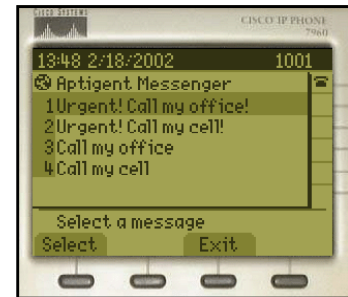

Keeping Your Enterprise Continuously Connected

Have you ever ...

- called a co-worker, customer or vendor with critical information, only to run into a busy signal or voice mail?
- had to get a message to a group of people RIGHT NOW, no matter where they are?
- been on a conference call, away from your computer, and needed to send a message immediately?

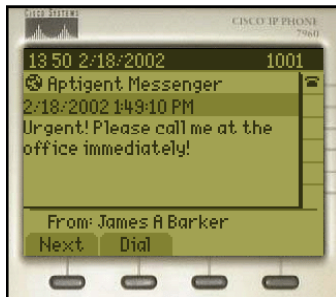

These communication roadblocks may seem to be unavoidable, but they cost you time, money and productivity. Your information is important, and it should get through - quickly and effortlessly.

When your message **must** get through, use Aptigent's *CTI Messenger*.

Select message text from IP Phone menu

How CTI Messenger Works

Receive text messages on IP Phone - while you're talking!

With *CTI Messenger*, your IP Telephone becomes a text messaging control center. When you want to contact someone with a message, pick up your telephone and launch the *CTI Messenger*. From here, you can select a message from a list of standard offerings, or create your own. Once you have selected or created your message, simply choose one or more delivery options (including IP Telephone, cell phone and email). For example, you can “push” a text message to an IP telephone, send the recipient an email and have an SMS message dispatched to a cell phone - ensuring that your message will get through to its recipient.

CTI Messenger provides a web-based console allowing you to select and customize the standard messages available at your phone. When away from your desk, you can access our web-based message delivery system to send messages from your laptop, web-enabled cell phone or wireless PDA.

Get Connected with CTI Messenger Today!

CTI Messenger can be implemented as a standalone application, or integrated with other IP Telephony services. See *Aptigent's CTI Dashboard* to find out how the technology in *CTI Messenger* can keep you connected to the vital information that drives your business.

Aptigent's consultants have real-world experience with current and emerging XML, legacy system integration and Internet technologies. We can help you define and implement IP Telephony applications that will add flexibility, power and value to your business today. Contact us to discuss how Aptigent's IP Telephony solutions can empower your business.

Visit us at www.apigent.com/iptelephony.shtml for more information.

Text messages can be routed to cell phones too!
